Cooper Lighting announces a quick ship program of its most popular architectural downlights serving the NYC market. These products, Portfolio by Atlite, are manufactured at the Cooper Hicksville NY facility by IBEW Local 3 employees.

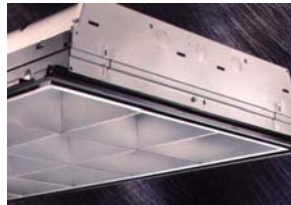

Fixture housings are shipped with either a 120/277V electronic ballast, or a dimming electronic ballast (specify voltage), with optional EM battery pack. All housings ship within 5 working days after receipt of order at our Hicksville facility.

Reflectors are available in attractive haze finish standard, with an overlap flange painted white. Open wall-wash reflectors are also available. Most reflectors will ship in 5 working days after receipt of order at our Hicksville facility.

For fixtures with EM battery pack, the reflector will have a hole drilled to accommodate an internal test switch/indicator light. Crossbaffle fixtures require separate test switch/indicator light when incorporating emergency battery pack.

Metalux by Atlite provides popular 2x2 and 2x4 lay-in fluorescent fixtures in 20 gauge steel bodies, and riveted end-plates. These fixtures also ship within 5 working days after receipt of order at the Hicksville Facility. Universal voltage electronic ballasts are standard. Emergency battery packs and pre-installed fixture whips are also available.

The most popular Atlite emergency lighting units and exit signs also ship within quick-ship time frames. Consult this brochure for Atlite products included in the program.

SPECIAL NYC DELIVERY REQUIREMENTS CAN BE ACCOMODATED
